Have the power to act by sounding the in-built alarm or speaking through the two-way talk feature.

Light up dark spots and ward off potential intrusion by adding another layer of perimeter protection, the LightCamera.

Two-way Talk

Take action when you need it most, whether that be to ward off potential intruders or to communicate with a delivery driver.

Built-in Siren, 100dB

Once you've verified the alarm through the Full-HD camera images, you can sound the alarm, ensuring intruders are stopped in their tracks!

Pinpoint protection of what matters most

Ask your installer about the fully customisable detection areas, programmable alarm responses, and motion sensitivity, to deliver the exact level of protection and notifications you require.

Crystal clear video, even in complete darkness

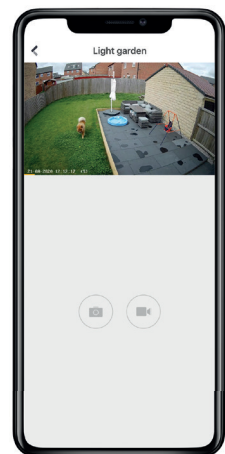

Rest assured that even in complete darkness, you can see what's happening with 3D DNR (3D Digital Noise Reduction), the noise effect in low light conditions is reduced to deliver clear Full-HD images up to 18m.

ProControl+ brings it all together

ProControl+ allows you to view your security system and video in one platform. When combined with the External Detector, you're able to get powerful video verification, which sends a clip of the activation direct to your device, meaning you can take action quicker and with more confidence, even before the intruder has reached the property.

Illuminate any potential intrusion

Equipped with dual lights that produce a powerful combined brightness of 2500 lumens, alongside 270° PIR sensor, the LightCamera puts any intruder in the spotlight so you know what's happening.
